

Projecting from the Podium Computer

(also see Podium and Control Panel instructions)

1. Make sure the podium computer is turned ON; log into your Mikenet account.

2. Locate the **POD COM** source button on the control frame.

3. Select the desired projector by pressing the **POD COM** source button, then touching either the left or right projector on the touch screen. (Note: If you want the computer image to project on both screens, you'll need to press the **POD COM** source button,

then select one projector; then press **POD COM** again and select the second projector. The projectors are set up from the instructor's point of view—the right projector is on your right as you face the class; the left is on your left.)

4. A warm up bar screen will appear on the touch panel if the **POD COM** is the first source selected. The warm up bar indicates that the projector lamp is coming on.

NOTE: Only one computer may be used at a time in this room—you cannot display your laptop computer on one screen while you display the podium computer on the other.
